LIST OF NATIVE SEEDS AND PLANTS--

ALSO CHOICE PERENNIALS

The following wild flowers were all propagated and grown at Valley Gardens. Conservationists can buy our stock knowing that they are not contributing to the despoilation of any natural area. Gardeners can buy knowing the stock has the compact root system of the nursery-grown plant, not the rambling root of the collected plant that had to compete with other vegetation in the natural habitat.

ACONITUM UNCINATUM - Clambering Monkshood or Summer Aconite. 3 to 5 ft. Blue helmet-shaped flowers in late summer or early fall. Shade or partial shade. Plants only.

ACTAEA ALBA - White Baneberry. About 2 ft. Racemes of white flowers in spring. Fruit glossy white berry with black dot on tip. Rich moist soil in shade or light shade. Seed only.

All of the plants listed are field-grown and have been propagated either by seed or division. If shade-loving, they have been grown in beds under lattice. All plants that we have indicated as growing in light shade or full sun, we find grow very well here in Michigan in the full sunlight with a heavy mulch. Also, plants ordinarily found only in the marsh grow very satisfactorily in the garden with a mulch both in summer and winter. For mulch, we use decaying hardwood sawdust. Straw, hay, grass clippings, etc., would be satisfactory. Sawdust has the advantage of being free of weed seeds.

Unless otherwise indicated, all plants are 35¢ each, 3 - \$1.00, 6 - \$1.80, or 12 - \$3.00 of one kind. All orders of \$2.00 or over postpaid in the United States. Under \$2.00, the buyer pays the postage. We cannot accept plant orders under \$1.00.

All of our seeds are kept in glass containers, and will be packaged only as orders arrive. Seed should be planted early while ground is still cold. Some seed may not germinate until second year.

Seeds are 25¢ per packet, or five packets for \$1.00.

Leaflet "No. 243" U.S.D.A. (obtained from Supt. of Documents, Washington, D.C., cost 5¢) will be found most useful in germinating fine seeds. Larger seeds may be planted directly in the ground where shade and moisture condition can be controlled.

A certificate of inspection is attached to each plant shipment.
